

DIGITAL WORKSPACE:

# Transforming healthcare with iPad solutions

Digital workspaces have heavily impacted the healthcare sector and have supported clinician mobility and enhanced patient care during the pandemic.

The health and medical industry is one of the top three fields to accelerate the growth of mobile devices.<sup>1</sup>

## 77%

of public sector IT-decision makers said **COVID-19 accelerated the need for investment** in technology<sup>2</sup>

## iPad with apps can enhance the healthcare experience for all

## 72%

of hospitals cite **improved quality of patient care** as a direct result of clinical mobility<sup>3</sup>

Here are just some of the benefits:

## Healthcare organisations

**80%** in healthcare, feel they need to **move to a more outcomes-focused approach** in tech<sup>2</sup>:

### Productivity

Greater productivity through streamlined workflows

Zero-touch deployment through Apple Business Manager

Simplified and secure patient data collection via iPadOS apps

### Security

Safe device disposal via XMA

Protected against emerging security concerns with regular updates

Records and data accessible via secure apps

### Budgetary

Tailored financial options

## Doctors and nurses

## 91%

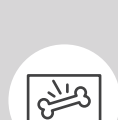

of nurses **expect to spend less time away from patients** thanks to mobile access to electronic health records<sup>3</sup>

Apps give instant access to the right data to make the best patient decisions

Face ID and Touch ID can be used to provide secure access to clinical apps

View patient imaging studies via apps with high-resolution Retina display and powerful graphics performance

Built-in camera works with third-party apps to securely photograph wounds and store in-patient records

## Doctors and nurses

## 77%

of recently hospitalised patients said they **felt positive about clinicians using mobile devices** in their care<sup>3</sup>

## Patient

CareKit empowers patients to manage their health

HealthKit-enabled apps allow recording of health data and sharing with care team

A human healthcare experience through delivery of personalised care via apps

Patient-use iPad provide in-hospital entertainment and enable contact with home
