

DIGITAL WORKSPACE:

Connect devices for smarter digital working

Digital working is the present – and the future.

Your business needs to be flexible by design, providing a secure digital workspace for your people to do their best work from anywhere.

By using clever digital capabilities to improve people's environments and experiences, you can reset the balance for a stronger, more effective business.

But a connected workforce means connecting teams with the right technology. **Here's how to find the right device.**

1. Put people first

Your devices should work around your people, not the other way around.

- Do your people work in an office or out in the field?
- Do they travel between work and home with devices?
- Do they present to clients?
- What level of processor performance do they need?

HP EliteBook x360 1040 G8

is optimised for mobility and packed with power to empower digital workers.

73%

of workers surveyed want **flexible remote work** options to continue.

Starting at **1.32 kg**,

with a **1 TB SSD**

and **32 GB of RAM**,

this device is **portable and powerful.**

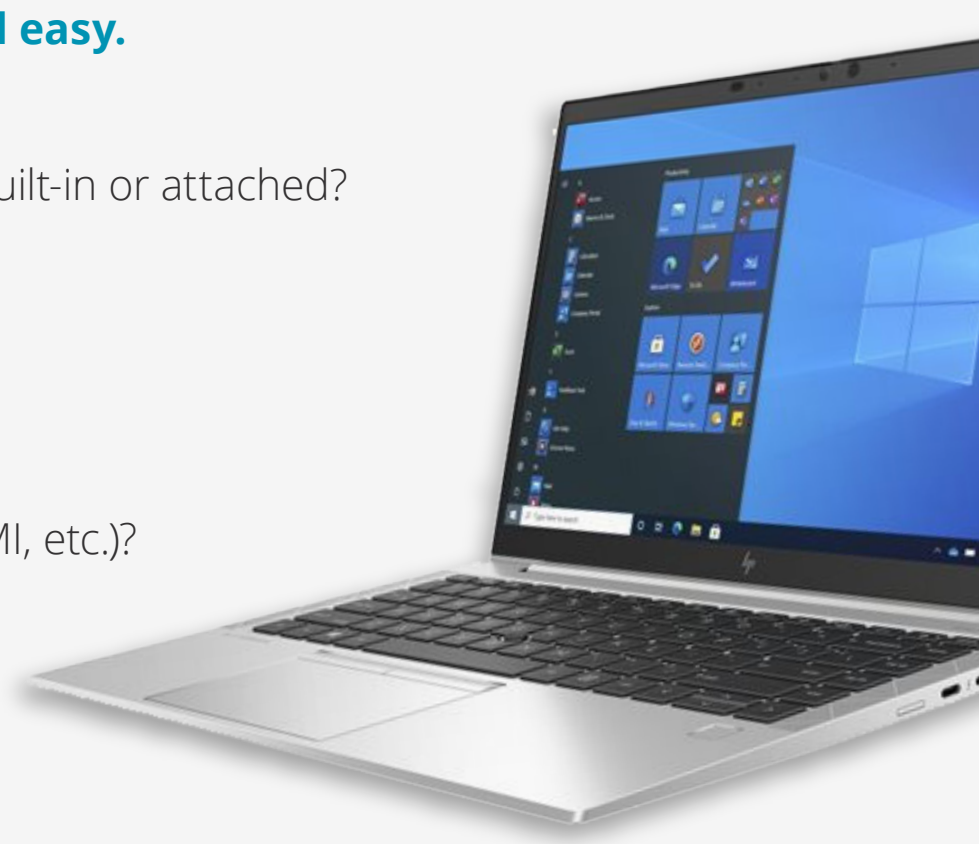

2. Collaborate with clarity

People expect remote collaboration to be clear and easy.

- Do your devices have high-quality cameras? Either built-in or attached?
- Is sound quality critical to your people's work?
- Which accessories will users need?
- Will the user need expansive connections (USB, HDMI, etc.)?

HP EliteBook 840 G8

features a 720p HD IR privacy camera and stereo audio by Bang & Olufsen for high-quality collaboration.

Users can communicate and meet as if they were in the same room, **boosting productivity** and **employee satisfaction**.

85%

of businesses say productivity has increased as **"a result of greater flexibility."**

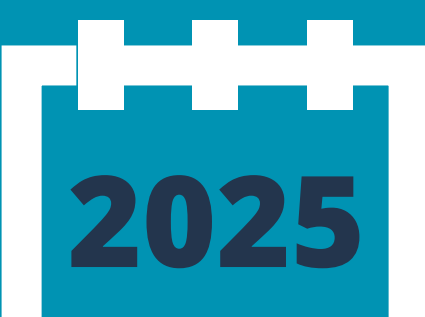

3. Build a unified fleet

Just as people need to work well together for business success, devices also need to be linked and well-managed.

- How much IT resource is available to manage devices?
- What level of shadow IT risk is acceptable?
- Are employees able to physically present devices to a nearby office?

Both **HP EliteBook 840 G8** and **HP EliteBook x360 1040 G8** benefit from manageability tools to make life easier for IT.

HP devices are **simple to set-up and manage**, no matter where they are used.

The total installed base of **Internet of Things** connected devices worldwide is projected to reach

30.9 billion

units by 2025.

4. Secure the ecosystem

Your connected digital workspace needs to be defended from cyber threats.

- Does IT have a suitable security policy?
- What applications and data are on the cloud? And how secure is this cloud?
- Are employees trained to spot and avoid phishing attempts?
- Is your security infrastructure up-to-date?

HP Wolf Pro Security Edition

offers multiple, invisible lines of protection to defend data, devices and employees from cyber threats.

It allows users to work how and where they work best, with total peace of mind.

Phishing and business email compromises cause over

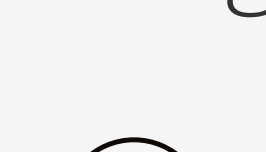

67%

of all breaches.
